

Date: August 27, 1974

TO WHOM IT MAY CONCERN:

On August 27, 1974, Realty Assistant made field trip out to Haystack area, met with George Warnock, Gilman C. Ritter, Director of Mining Division and Philip P. Powers, Professional Engineer of Atomic Energy Commission. We reviewed the proposed new drilling location and discussed how mining will be conducted. The exploration done in the past showed there is 90% of uranium ores discovered within the area where they are going to mine, but at the present time the company is working on an access road to the proposed mining site, as well as getting a release from the surface owner. There are private and allotted lands around the property to be mined. The section in question is PLO 2198 lands.
